| 1 | I am reviewing the bridge painting project for the bird netting work sited in the spec sheet. I would like to know if plans are available on this project so I may get the bridge dimensions for the bird netting. Additionally – if the bridge is passing over water; What type of lift equipment may be used or provided in order to install the necessary cabling & bird netting to the bridge underside. | As far as lift equipment goes, we are open as long as they are not putting machines in the water. Using a UBIV, some form of temporary scaffolding, or perhaps a temporary barge to access the spans over water would be acceptable. Archived plans for each bridge have been posted. |
