LOCATION 1 82(KOREAN WAR VETS MEM HIGHWAY) FROM ROTH BRIDGE TO END OF
PCC SHOULDER APPROXIMATELY 750' SOUTH OF EXIT 152 OVERHEAD SIGN
- DELAWARE CITY/NEWARK

Taper mill of bituminous concrete shoulders will be required where guardrail and/or high tension cable barrier is present to preserve existing guardrail heights.

PCC patches are to be lifted and payment for pcc sawcutting will be for the perimeter of the patches only.

FINAL PAVEMENT SHALL MEET THE SURFACE REQUIREMENTS, AS SPECIFIED IN ITEM 401580 - RIDE QUALITY OF BITUMINOUS CONCRETE PAVEMENT

****The Contract Time for this project has been established on the basis that construction operations in both the northbound and southbound directions of SR 1 will be conducted concurrently when activities permit within the contractually allowed lane closure periods.**

The Contractor shall prosecute the Work in a manner that maintains active and measurable progress in both directions simultaneously during permitted lane closure times, except where sequencing constraints, safety considerations, or physical limitations preclude such concurrent operations, as determined by the Engineer.

The Contractor shall include in the Baseline Schedule and all schedule updates sufficient detail to demonstrate concurrent operations in both directions. The schedule shall clearly identify lane closure windows and corresponding work activities for each direction.

Failure to maintain concurrent operations, when practicable and permitted under the Contract, shall not be considered justification for an extension of Contract Time. The Contractor shall furnish sufficient labor, equipment, materials, supervision, and traffic control resources necessary to support simultaneous work fronts.

Any proposed deviation from concurrent operations that may affect the critical path shall be submitted in writing to the Engineer for review and approval prior to implementation.
